FATPOT

mission critical software

FATPOT®

*F*or *A*ll *T*he *P*eople *O*f *T*he World

The undisputed leader for mission critical system interoperability in Public Safety

Essential for everyday use. Indispensable in emergencies.

FATPOT SOLUTIONS

*fusion*PLATFORM™

Provides a full spectrum of configurable capabilities, from one-way information sharing (*fusion*AWARE, *fusion*NOTIFY) through full bidirectional (*fusion*UNIFY) interoperability of real-time incident and resource data between partner agencies' disparate CAD systems and other mission critical systems.

*fusion*PORTAL™

Provides a consolidated, real-time regional view into the *fusionPLATFORM*, including incident, unit status, and geospatial information. This GUI portal delivers situational awareness and a common operating perspective enabling unparalleled collaboration.

*fusion*CONNECT™ - CAD

*fusion*CONNECT - RMS
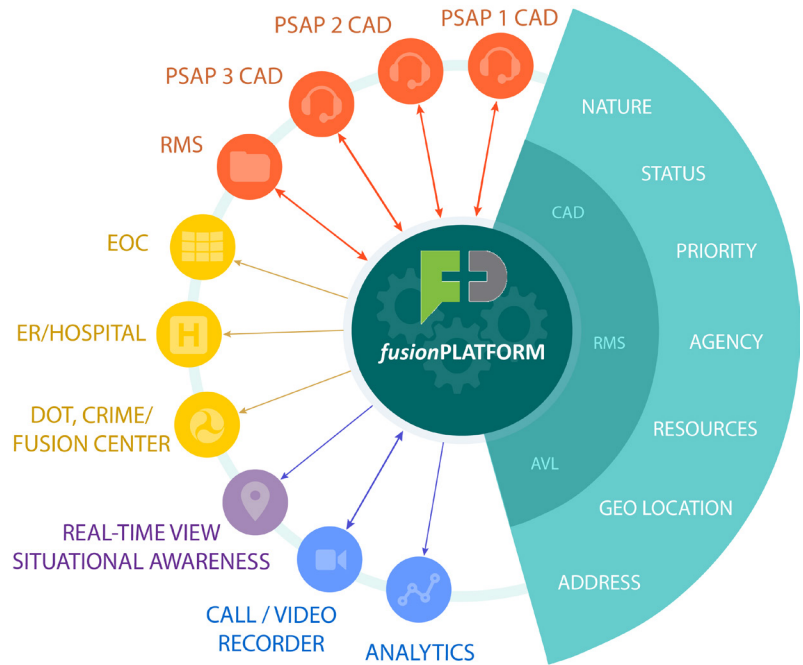

*fusion*CONNECT - GEO

*fusion*CONNECT - Media

*fusion*CONNECT - P25 Radio

Each *fusion*CONNECT option empowers agencies to connect the systems with which they want to share information and enable information sharing in one-way or two-way directions.

Welcome to the Next Generation of Public Safety Collaboration and Interoperability

THE ONLY REAL-TIME FUSION PLATFORM

The *fusion*PLATFORM is FATPOT's latest technology advancement that redefines interoperability in Public Safety. It provides unparalleled integration across disparate systems of all types. It creates an off-the-shelf intelligent hub where knowledge, information, and regional procedures are combined from multiple sources into one cohesive solution.

NEW LEVELS OF PRODUCTIVITY AND CONTROL

New levels of simplicity, control, productivity, responsiveness, and configurability are built-in *fusion*PLATFORM capabilities. Our patented *fusion*CONNECT technology turns real-time data from multiple sources into actionable information. Secure agency and user profiles ensure each connection provides the right data to the right person at the right time. Intelligent filtering, data translation, business rules, and geofencing are available to configure information and resource sharing workflows at the agency level.

FLEXIBLE SOLUTIONS THAT FIT YOUR NEEDS

Offering world-class availability, reliability, and scalability, FATPOT's next generation platform delivers an expandable, secure environment that is configured to meet the information-sharing needs of agencies large or small. An integrated administrative client – *fusion*PORTAL – centralizes the setup, configuration, management, and diagnostics for the entire system. Mutual-aid requests and other operating procedures are easily automated, allowing all users in a region to work at maximum efficiency and effectiveness.

Enabling collaboration to save lives

Key Advantages

Transfers incident details between dispatch centers with information appearing directly in the connected CAD systems. Highly scalable and configurable. Simple to administer and maintain. Adding additional agencies, systems, and sharing partners is easy. Provides back-up and failover between multiple CAD systems.

Built-in Intelligence

Code table translation is facilitated between each participant's code sets. Enables automation of regional standard operating procedures plus mutual and automatic aid agreements. Menu driven configuration environment empowers agency control. Ideal for both simple daily events and complex large scale incidents requiring inter-agency coordination.

Streamlined Workload

Save time and increase efficiency of dispatch operations through automated and transparent notification of regional incidents and resource sharing requests. Be assured that standard operating procedures will be followed even in the most stressful times.

THE FATPOT INTEROPERABILITY CONTINUUM

FATPOT embraces the standards-based approach outlined in the SAFECOM Interoperability Continuum (*https://www.dhs.gov/safecom/resources-library*) for achieving the recommended, optimal state of interoperability. Organizations can share information immediately through *fusion*AWARE while defining cross-organizational governance and regional procedures. Powerful business rules and filters available in *fusion*NOTIFY deliver automated notifications on specific events. Using *fusion*UNIFY organizations achieve the highest levels of two-way information and resource sharing to improve response times and saves lives.

*fusion*UNIFY™

- Incident details are automatically imported into CAD
- Transparent processing of shared incidents and units
- Dispatcher uses own CAD console for all interactions
- Real-time access to mutual-aid units (status, AVL)
- Manual or automated approval for mutual-aid requests
- Zero call processing delays on shared incidents
- Reduced response times improves responder safety
- Reduced response times saves lives and property

*fusion*NOTIFY™

- Receive notifications for sharing events
- Copy-n-Paste incident details into local CAD
- Share an incident with other agencies
- Request a unit from another agency
- Benefit from incident and unit sharing rules
- Send SMS/Email Alerts to subscribers

*fusion*AWARE™

- Real-time regional situational awareness
- Observe active shared incidents
- Observe unit status and location
- Observe incident details
- Map-based display – incidents, units
- Configurable client environment

Serving the Public Safety industry from the year 2002, FATPOT's mission is to deliver unparalleled interoperability to help save lives and property. FATPOT maintains many deployments in some of the most challenging operational environments. Our patented technology, with more than 82 unique claims, is now in its third generation. Implementations already exist with most of the top computer-aided dispatch systems in the industry.

Enabling collaboration to save lives

COLLABORATIVE & CONFIGURABLE

SCALABLE & RELIABLE

SIMPLE & POWERFUL

The mission critical environment of Public Safety agencies and first responders require proven, tested, and reliable solutions. FATPOT solutions are working today at hundreds of agencies around the world. FATPOT has the experience, the knowledge, and the only true real-time intelligent hub solution created specifically for Public Safety professionals. *fusion*PLATFORM is a mission critical foundation that can be relied on for years to come, allowing you to integrate and connect other technologies and systems as your needs evolve. The *fusion*PLATFORM enables collaboration with both public and private stakeholders, such as:

- Neighboring PSAPs and Dispatch Centers
- Emergency Operations Centers
- State Police/Highway Patrol
- Ambulance providers and emergency rooms
- Fusion and Crime Centers
- Utilities, Public Works, and DOT
- Schools, towing companies, and HAZMAT experts
